

MOLOLUWA MOSES

Senior Analytics Manager | Data Products, Machine Learning & Generative AI

London, United Kingdom | 07312937900 | mosesmolo@yahoo.com | mosesmolo.com/portfolio

PROFESSIONAL SUMMARY

Analytics manager who builds and ships data and AI products end to end, from pipeline to production to commercial outcome. Currently AVP at Barclays, managing four analysts while remaining hands-on across Python, SQL, and PySpark: engineered the data enrichment for a merchant brand-matching engine through an AWS migration and now leads a multi-agent Generative AI build with Data Science that releases around 1,200 analyst hours a year. Insight products delivered under this ownership have driven over £2M in new business in 11 months. Previously built the Account Health Score at the Financial Times, scoring 16,000+ B2B accounts monthly and lifting renewal rate from 76% to 82%. Six years across financial services and media, combining machine learning delivery with stakeholder partnership up to Director level. MBA, Imperial College London; MSc Computing (Distinction).

CORE COMPETENCIES

Data Product Delivery • Machine Learning & Predictive Modelling • Generative AI & Automation • Team Leadership & Mentoring • Data Pipeline Engineering • Experimentation & A/B Testing • Customer & Product Analytics • Data Quality & Governance • Stakeholder Management • Cloud Data Platforms (AWS, GCP, Azure)

TECHNICAL SKILLS

Languages: Python, PySpark, R, SQL, T-SQL, VBA

BI & Visualisation: Power BI, Tableau, Looker Studio, Microsoft Excel, Power Query

Data Platforms & Cloud: Snowflake, Databricks, PostgreSQL, NoSQL, AWS, GCP, Azure

AI & Machine Learning: Generative AI, Large Language Models, Multi-Agent Systems, Claude API, Prompt Engineering, NLP, Amazon SageMaker, Predictive Modelling

Methods: Customer Segmentation, Statistical Analysis, A/B Testing, Text Mining, Forecasting

Delivery & Governance: Agile, Scrum, Waterfall, PMP, Data Governance, Product Management

PROFESSIONAL EXPERIENCE

Senior Decision Analyst (AVP) | Barclays, London

September 2025 – Present

- Engineered BEaM (Brand Enrichment and Monitoring), a merchant brand-matching engine delivered through the migration from an on-premise customer data platform to AWS. Resolved millions of merchant names where merchant IDs or card acceptor IDs had changed, re-tagging transactions to a canonical brand and improving spend data quality across downstream segmentation and insight products.
- Built Highloyalty within BEaM, a PySpark loyalty analytics pipeline on Databricks implementing store continuity detection, terminal switching logic, and loyalty scoring over large-scale transaction data, with full pytest coverage and automated controls for schema drift, reconciliation, match rate, and model drift.
- Leading a Generative AI build with the Data Science team to automate client insight reporting through a multi-agent architecture, replacing a manual process of bespoke Tableau build and written insight generation. Removes around 20 hours per report across five monthly reports, releasing approximately 1,200 analyst hours a year.
- Drove over £2M in new business in 11 months by building an insight-product portfolio (Consumer Spend Report, Industry Pulse, and Customer Pulse) covering competitor demographics, spend behaviour, and market benchmarking. Distributed through 100+ Relationship Directors to their clients, lifting client engagement with strategic insight products by 20%.
- Manage and develop a team of four analysts, setting individual goals and objectives, running regular performance reviews, and reviewing technical work, while partnering with a Director on roadmap and delivery priorities.
- Traced the true origins and behavioural drivers of customer income data, exposing critical data gaps and building the business case for a cloud-platform enhancement that strengthened predictive models and long-term decisioning accuracy.

Lead Data Insight Analyst | Financial Times, London

July 2023 – August 2025

- Built and led the Account Health Score, a cross-functional data product scoring over 16,000 B2B accounts monthly for Sales, Customer Success, and Marketing. Modelled account health from function-specific metrics into a single red/amber/green risk status, directing Customer Success effort onto at-risk accounts and giving Sales a prioritised view for account growth.
- Delivered a 6 percentage point improvement in renewal rate (76% to 82%) and a 50% relative uplift in upsell and cross-sell conversion (4% to 6%) following adoption of the Account Health Score, making it a core driver of FT Pro's double-digit revenue growth.
- Led a team of two analysts, setting objectives, reviewing progress, and owning delivery across the insight portfolio.
- Turned unstructured Voice of the Customer feedback into product and marketing strategy, applying NLP sentiment analysis and text mining in Python to identify which product features customers valued most. Findings shaped bespoke customer solutions and informed account expansion targeting.
- Mapped the end-to-end B2B customer journey to surface growth drivers and conversion bottlenecks, visualising findings in Looker to inform product and CRM decisions.

MIS Reporting Analyst | Sir George Monoux College, London

March 2023 – June 2023

- Spearheaded college-wide adoption of Power BI dashboards, cutting report development time by 25% and increasing stakeholder data accessibility by 50%; developed and maintained SQL/SSRS reporting suite improving accuracy and timeliness by 30%.

Data Analyst | Generation UK and Ireland, London

August 2022 – March 2023

- Built ETL pipelines and Power BI reporting to identify best-performing product categories and sales insights; developed a Python logistic regression model to predict short-interval market price movement from historical data.

Lead Data Analyst | PrecPearl Limited, Remote

October 2018 – January 2021

- Built Power BI dashboards for customer survey and supplier quality analysis, presenting findings directly to clients; implemented MySQL Workbench relational database to improve organisation-wide data accessibility.

VENTURES & INDEPENDENT PROJECTS

- **SettleTax** (settle-tax.com) – Tax compliance platform for Nigerian SMEs. Built LLM-powered explanation layer using the Claude API to translate tax obligations into plain language; designed async verification onboarding and freemium pricing model. Published to Google Play Store.
- **Heliotelligence** (heliotelligence.com) – Solar asset management digital twin platform. Built physics simulation engine (pvlib, PVWatts) on FastAPI and TimescaleDB; currently designing AI agent workflows for automated asset diagnostics and performance reporting.
- **Veerd** (veerd.co) – Career-matching mobile application, published to the Apple App Store.

EDUCATION

MBA, Imperial College London | Jan 2025 – Present | Elected Business College Ambassador | AI, Strategy, Financial & Management Accounting, Decision Analytics

MSc (Hons) Computing and ICT, University of East London | Distinction | Jan 2021 – May 2022

BSc (Hons) Mechanical Engineering, University of Lagos | Sep 2012 – Aug 2018

CERTIFICATIONS

AWS Certified Data Analytics Specialty • Google Advanced Data Analytics • Google Cloud Certified Professional Cloud Architect • Google Cloud Certified Associate Cloud Engineer • Microsoft Azure Security, Compliance & Identity Fundamentals • Microsoft Power Platform (PL-900) • Project Management Professional (PMP)

ACHIEVEMENTS

UK Tech Impact Awards 2024: Nomination, Best Digital Innovation (Financial Times) • Vice President, Institute of Mechanical Engineers (IMechE London), 2018 • Runner-up, BCS Hackathon Health Team event, 2021 • Google Cloud Africa Developer Scholar, 2021
